

Jones Nash

A nearly completed installation for a large detached house. An Eta Hack, 60kW wood log boiler was selected with a 60kW oil boiler as a standby. The Eta log boiler is the lead boiler, with the oil boiler coming on when needed.

Mains pressure domestic hot water is also supplied via heat exchangers in

We also added a 500lt pressurised cold water store, to ensure sufficient volume of pressurised water for the numerous bathrooms in the property.

The fuel supply for the log boiler is taken from the estates fallen trees and felled timber. Briquettes can also be used
